

Master System Integrator Capabilities

VAE Group is an HVAC building solutions company that started in 1997. Our Technology teams work together to develop solutions that work and are delivered on time and on budget. Our expert staff have an authentic passion for delivering outstanding results. This energy drives innovative thinking, efficient performance and positive relationships. VAE is dedicated to designing, installing, commissioning and servicing building automation systems to ensure your building performs better. This is our brand promise of 'Built in Certainty'.

VAE is your single point of contact for every building technology integration. As a Building Data Architect, we understand the clients intent and deliver on their expectations with all types of cutting-edge technology solutions. Preferably, we join the journey at the design phase and consult on every step of the project to focus on building the best long-term solutions for their assets. We have a vast knowledge within integrated systems, manufacturers, designs and industry best practices.

What we offer

- Complete turn key solutions - From design to implementation and commissioning
- IBP - Integrated Building Platform
- ICN - Integrated Communications Network
- Development of integration drivers for any system
- Tridium based solutions
- Tridium OEM
- Tridium development
- Scalable solutions
- Customised graphics and dashboards

What this means for you

- Open protocol platform - not locked in
- Financial savings
- Future proof technology
- Reduced risks during implementation and operation
- Expert and reliable support

Our Smart Building Platform Solutions

By deploying an integrated platform, all the systems information will be accessible and usable. Our goal is to link the building stakeholders to their systems and provide useful and meaningful information and control. The Tridium framework gives our clients a clear pathway to software layers responsible for integration, aggregation, and communication of the building systems.

Our Solutions

Integrated Building Platforms

VAE's in-house technology team can design and deliver an overarching platform to bring together numerous building service systems within individual or a network of buildings, providing single seated control.

Integrated Communications Network

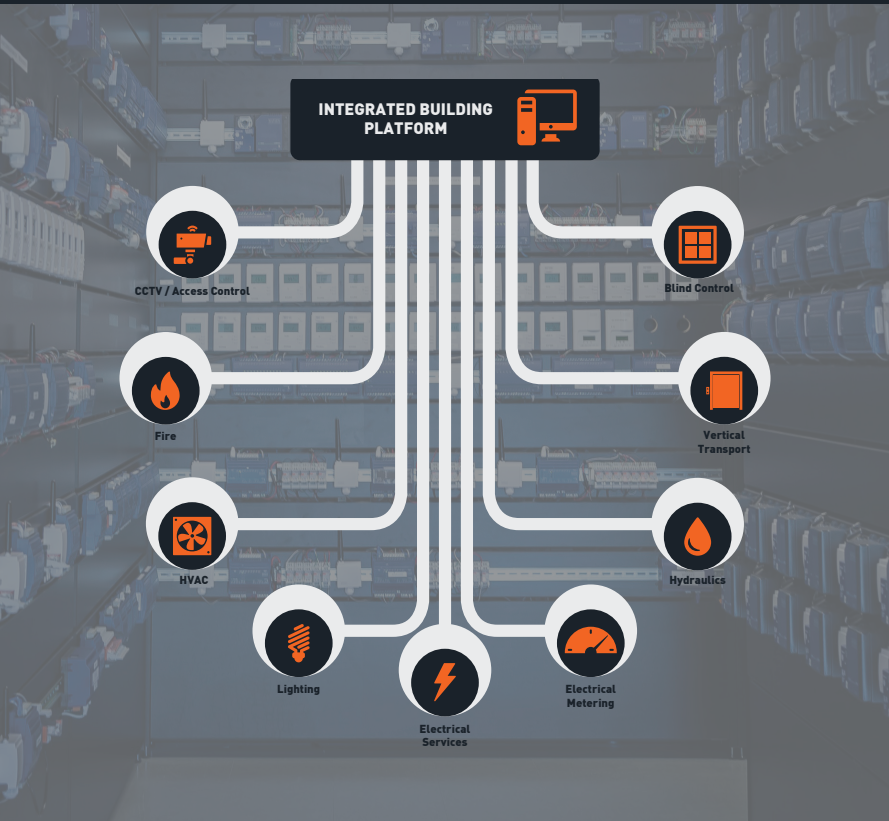

VAE provides a comprehensive answer to designing, installing and commissioning the integrated communications network of your smart buildings using our in-house team of experienced technicians and partners.

Portfolio Management System

VAE provides scalable platform solutions to consolidate multi-site systems to enable building portfolio's to be compared and managed from one place. Key Performance Indicators and other benchmarks can be easily implemented across various properties.

Client and tenant Engagement

VAE delivers tailored interfaces, merging different technologies installed in your buildings and provides it to all stakeholders. This solution enables all stakeholders to engage with the built environment. With our designs, you can expect personal, consistent, and relevant interactions to build deeper connections with technology.

THE VAE DIFFERENCE

Our company prides itself on providing “**Built in Certainty**” for our clients.

Everybody knows they want to have that smart building, but they may not know how or where to start.

Our emphasis is on listening and translating our clients' operations and building challenges and helping them utilise all the available technology to simplify their operations.

Over the past few years VAE has gained experience from design to implementation of highly technical projects through our team of Systems Integrators, UX/UI Designers, Software Developers and specialised Project Managers.

VAE Group focuses on delivering real outcomes using proven technologies, with a staged process to ensure successful adoption.
